

POLLEN - FOR PAWS - THE NATURAL PET SUPPLEMENT

Australia has one of the highest records of dog ownership in the world – our warm climate and love of the outdoors ensures pets thrive in our country and live a long and happy life. But what if you could give your pets health an even bigger boost as they grow older?

Bee Pollen is a supplement which is gaining popularity in Australia – regarded as 'nature's superfood', these magic granules are packed with live enzymes, the 22 essential elements of the human body, and the vital nutrients for human survival. One of the most popular brands on the market, 'Pollen Power', Power is certified and picked by leading beekeepers from eucalyptus plants in Western Australia – a region which is proven to contain plants with a higher nutrient level and superior taste to anywhere else on the planet.

After seeing the amazing effects of Pollen Power among adults and children, the makers have now created 'Pollen 4 Paws', a 100% natural specially balanced bi-formula enriched with vitamins, minerals, amino acids, enzymes, essential fatty acids, Omega 3 & 6 and much more which is perfect for your pets health, wellbeing and longevity. Still using the Western Australian pollen, the product also includes pure Green Lipped Mussel from the pristine waters of the Marlborough Sounds in New Zealand. Fused together, these two super foods provide a safe, natural and effective way to help reduce inflammation in dogs' joints as well as assisting joint function, flexibility and mobility of your pets. The special mix will also keep your loyal pets full of energy and strength.

Unlike bulky, nasty tasting pet medication, Pollen 4 Paws comes in a fine powder which can be added to your dogs daily meals – half a teaspoon a day will keep them fighting fit.

Pollen 4 Paws is priced \$24.95 and available from www.beepollen.com.au
