

THE BUZZ ABOUT BEE POLLEN!

Western Australia's 'Pollen Power' -
nature's most complete superfood

Their constant buzzing may irritate you and you might have suffered a nasty sting from one this summer, but love them or hate them bees hold the key to a healthy, energetic, and long-lasting life for all of us.

Scientific evidence shows that bees date back to over 35 million years, and while the world around them has evolved, bees have remained unchanged. This is mainly due to their potent antibiotic and defensive properties - bees have the strongest antibacterial and immune properties found in nature and are responsible for 80% of the world's pollination. And unlike their other 6-legged friends, bees are the only insects to provide food for humans.

Albert Einstein himself is famous for saying: "If the bee disappeared off the surface of the globe, then man would only have four years left to live". It's a startling fact; human life is dependent on bee

pollination, and without it, our plants, animals, and eco-system would collapse - and the 'Food of the Gods' created by bees to pollinate plants is now being harnessed as a health supplement for everyday Australians.

Forget artificial tablets and supplements; if you want to rejuvenate your body the natural way you should be adding 'Pollen Power' to your diet daily. Regarded as one of the best bee pollen products in the world, Pollen Power is certified and picked by leading beekeepers from eucalyptus plants in Western Australia - a region which is proven to contain plants with a higher nutrient level and superior taste to anywhere else on the planet.

The **Pollen Power** granules are packed with live enzymes, the 22 essential elements of the human body, and the vital nutrients for human survival. Scientists consistently describe bee pollen

as one of nature's 'complete nourishing foods', and with its benefits including rejuvenating the body, the stimulation of organs, a longer life span and increased energy levels, it's easy to see why.

Bee pollen has been used for over 5000 years as a food source and to increase energy, vitality and stamina. It is also known to increase sex drive, help with allergies, manage menstrual pain, fatigue, promote prostate health, maintain youthful skin, and live a healthier life.

Bee pollen is a natural source of protein, and this has led to popularity among athletes, fitness fanatics, and sporting legends including boxer Mohammad Ali, all using **Bee pollen** to accelerate their recovery and in preparation for their next sporting victory. But bee pollen can be used by anyone with an interest in their wellness; adults are advised to add 2 teaspoons a day to their diet (starting with smaller amounts and building up gradually), athletes

can have up to 4 teaspoon servings, and children can start with a couple of granules - it's never too early to boost your health and immune system. **Pollen**

Power can be added to salads, stirred in to vegetable juices, sprinkled on toast; providing the granules remain cold and uncooked as heat destroys the live enzymes and nutrient value.

Bee healthy with natures 'Ambrosia'. Pollen Power is available to purchase online at www.beepollen.com.au priced \$49.50 for 1kg. 1kg equates to a 100 day supply at 10g per day.
